

FLYSPRAY®

Codice prodotto: 3400060

Category: PMC

Pyrethrum-based aerosol insecticide

Italian Ministry of Health Registration:

n. 1348

Formula:

Aerosol

Description:

Rapidly kills all insects: flies and mosquitoes, blowflies, cockroaches, ants, fleas in houses, hospitals, hotels, restaurants, canteens, shops, vehicles, factories, farms; thanks to the paralysing effect of Pyrethrum it is also effective against wasps and hornets, thus minimising the risk of stings for the operator.

Method of use:

In order to eliminate crawling insects, the canister is fitted with a straw, which must be removed to spray in the air against flies and mosquitoes.

Against crawling insects: direct the straw to penetrate cracks, crevices, corners, under sinks and kitchens, behind fridges, etc. where cockroaches and other insects normally nest.

Against flying insects: remove the straw, pulling it away from the button, and spray in the air directing the jet upwards: 3-5 seconds every 30 cubic metres of space.

Do not use the product in excessive or improper quantities. In normal sized spaces do not exceed 4-5 seconds. Repeat treatment only when necessary and direct the jet upwards, away from people. If the product is used in a place where people stay for a long time or in bedrooms, ventilate the room before spending any time there again.

User:

Professional

Warnings:

Do not contaminate foodstuffs, beverages or their containers during use.
