**Codice prodotto: 3400125**

**Category: PMC**

Foaming aerosol insecticide for the control of wasp and hornet nests

**Italian Ministry of Health Registration:**

n. 20924

**Formula:**

Aerosol; Foam

**Description:**

VESPABLOCK (WASPBLOCK)™ is an aerosol insecticide with a strong knockdown action based on natural Pyrethrins and Piperonyl Butoxide. The natural Pyrethrins give the product a high knockdown effect and the presence of Piperonyl Butoxide enhances the effectiveness of the treatment causing the death of wasps and hornets in the nests after a few seconds. The special foaming formulation is specially designed to envelop the nest with a dense foam, preventing the insects from escaping and increasing the contact time with the insecticide. Thanks to the specific formulation and the special dispensing valve, developed to reach a spray range of 4 metres, it is possible safely to treat wasp and hornet nests, which are usually located in hard-to-reach places (under roofs, windowsills, wall cavities, roller shutter boxes and other domestic and civil environments).

**Method of use:**

Stand at a distance of 3-4 metres from the nest to be treated. Shake well before use and spray VESPABLOCK (WASPBLOCK)™ at short intervals (no more than 3 seconds) directly on the wasp and hornet nests. Treat until the nest is completely covered with foam (1-2 sprays of 2-3 seconds are usually sufficient). Spray during the cooler hours of the day (preferably in the evening) when the greatest number of insects are present in the nest.

**User:**

Professional

**Warnings:**

Keep children and animals away during treatment. Do not contaminate foodstuffs, beverages or their containers during use.
