

FLY BAG

Codice prodotto: 2530310

Category: Absent

Ecological trap with food attractant for house flies and blue flies.

Description:

FLY BAG is an easy and environmentally friendly system for catching flies without the use of insecticides. Field tests have shown the capture of thousands of flies in a short time. The flies are lured into the trap by the attractant. Once in the trap, they cannot get out and drown in the water, increasing the attractiveness of the trap for other flies. Dramatically reduces the population of flies infesting gardens, animal shelters, stables, outdoor places and building exteriors. Simple to use, simply mix the organic attractant with added water. Lasts up to six weeks.

Method of use:

HOW TO USE – Remove the plastic lid on the top of the trap, open the wire mesh cone with your fingers to ensure that the flies can pass through, and pour in the entire bag containing the attractant. Add one litre of water. Close the lid tightly by inserting the feet back into the holes in the trap. Hang at a height of not less than 180/200 cm from the ground and expose it to direct sunlight for at least 7/8 hours. The trap is activated after 3/4 days from the positioning if the external temperature is about 18-20°C, if the temperature is lower it needs a few more days to be activated. In the case of very high temperatures, over 30° – 35°, it is recommended to place the trap in the shade. Add water if necessary to restore the initial level if you notice that it has evaporated. One trap has an effectiveness of six weeks and outdoors covers and area of about 80/100 sqm. Inside stables, one trap per 30/50 sqm is recommended. The use of several traps increases the trapping capacity. It is advisable to use the traps outside or at least not inside houses. To dispose of the trap at the end of its use, it is advisable to wear a pair of protective gloves to avoid contact with the dead insects and any resulting bacteria. It is advisable to dispose of the trap in a rubbish bag and dispose of it according to regulations. Wash your hands thoroughly after disposal.
